

Healthy Control Veterans needed for Brain Imaging Study

Category

Other

Enrollment Closing Date

Jun 30, 2018

Description

We are looking for healthy control subjects for a study investigating a new brain imaging technique that may be sensitive to brain changes in Post-Traumatic Stress Disorder (PTSD) and mild Traumatic Brain Injury (mTBI). The study involves an MRI brain scan and assessments of your thinking and mood. Your participation will take approximately 5-6 hours over the course of 2 visits.

Requirements

- *OEF/OIF/OND Veterans, with combat exposure, 18-50 years of age.
- *MRI safe (no metal inside the body)
- *No history of TBI or mental health disorders

Benefits

Your participation may help researchers and clinicians develop better tools for diagnosis of PTSD and mTBI.
