

Opportunity for Human Research Subjects

Everyday Forgetting Study for Veterans with or Without History of TBI

Neurocircuitry of Prospective Memory in Veterans with Mild Traumatic Brain Injury

Category

PTSD/TBI

Enrollment Closing Date

August 30th, 2021

Description

Dr. Scott Sorg is conducting brain imaging research in OEF/OIF/OND Veterans with or without a history of blast-related mild traumatic brain injury (TBI). This study involves 3 visits: (1) clinical interview and questionnaires, (2) neuropsychological examination with a variety of tests used to assess cognitive functioning, (3) MRI scan of the brain. Veterans will receive \$150 for completing all 3 visits.

Requirements

Looking for Veterans who:

- *Are 18-50 years old
- *Do not have a neurological disorder
- *Have or do not have a history of blast-related TBI
- *Are MRI safe (no metal inside of the body)

Benefits

Your participation will help researchers learn more about brain structure and function in Veterans with TBI.
