

Looking for Veterans with TBI for Brain Imaging Study

Category

PTSD/TBI

Enrollment Closing Date

09/30/2019

Description

Dr. Huang and VA Collaborators are conducting research on brain activity, brain function, and cognitive function on Veterans with diagnosed mild traumatic brain injury (mTBI). This study involves 3 sessions: (1) neuropsychological testing and mental health assessment, (2) magnetoencephalography (MEG) scan, (3) MRI scan completed over 2 visits.

Veterans will be paid for participation.

Requirements

Looking for Veterans:

- without PTSD, - without neurological disorders, - without metal objects in the body unless removable, - not claustrophobic.

Benefits

Your participation can help researchers understand more about brain function in Veterans with TBI.
