

## **Investigating Exercise-Induced Neuroplasticity and its Mechanisms in Parkinson's Disease: Targeting Executive Function and Brain Circuitry**

**Category**

Parkinson's Disease

**Enrollment Closing Date**

Feb 28, 2020

**Description**

Dr. Dawn Schiehser is conducting research to learn about the relationship between physical activity and cognition and brain functioning in people with Parkinson's disease (PD). We are looking for individuals diagnosed with Parkinson's disease, who are willing to undergo neuropsychological testing, an MRI scan, walking and balance testing, and exercise tracking.

**Requirements**

- \*At least or over 50 years of age
- \*Neurological diagnosis of PD
- \*No other neurological conditions (e.g., stroke)

**Benefits**

- \*You may earn up to \$210 for your participation
